Recent Developments

Global News
- In the United States, those who have been fully vaccinated will be allowed to gather in small groups indoors without face masks or social distancing measures. Travel should still be avoided.
- New virus variant from Brazil, the P1, is more contagious and is able to reinfect recovered COVID-19 patients. Confirmed cases in Brazil surged by more than 66,000 in the last 7 days, partly driven by the new variant.

Regional News
- Philippines reported more than 2,000 new cases for the tenth consecutive day, due mainly to presence of highly transmissible new variants and reopening of the economy. Sinovac vaccine has been approved, but not for use by healthcare workers.
- Beginning April, Thailand will halve mandatory quarantine period to 7 days for foreign visitors who have been vaccinated within 3 months of the travel period. Unvaccinated visitors will have to serve 10 days quarantine.
- Indonesia has approved AstraZeneca vaccine, after receiving more than 1 million doses of the vaccine. More than 11.7 million doses will arrive in batches until May.

Vaccine News
- World Health Organisation (WHO) advises against the introduction of “vaccine passports” as a pre-requisite to international travel due to inadequate supply and uneven distribution of vaccines globally.
- In a laboratory study, Pfizer/BioNTech vaccine was reported to be able to neutralise the P1 new variant of coronavirus that was first identified in Brazil. Testing for a third booster dose to induce stronger immune response is underway.
