Recent Developments

Global News

- **Germany** has reversed plans to end mandatory quarantine for COVID-19 patients following concerns that the quarantine removal would drive higher rates of infection.
- The first cases of “Deltacron” and other recombinant COVID-19 variants have been detected in **Australia**. Cases rose to its highest level since end-January 2022.

Regional News

- Mildly symptomatic and asymptomatic cases in **Shanghai, China** remains above 20,000 and account for 97 percent of cases, higher than the global average of 50 percent. The high percentage has been attributed to rapid surveillance testing.
- Infections, severe cases, hospitalizations and deaths continue to decline in **Vietnam**, with the Health Ministry announcing that the pandemic has been brought under control.
- **Japan** will lift entry bans on 106 countries and regions, including the US and most of Europe effective April 8. However, limit on visa issuance will remain in place.
- Despite rising cases, **Thailand** plans to remove mandatory on-arrival testing for foreign visitors from next month to attract tourists amid a rebound in global travel.
- **Korea** is planning to lift social distancing rules and outdoors mask mandates if cases continue to decline. Daily new cases have stabilized at around 200,000.

Vaccine News

- A study from **Israel** found that a second booster shot of Pfizer-BioNTech's Covid-19 vaccine provide additional protection against the Omicron variant infection, and severe illness among older adults. But, the booster’s effectiveness against infection wanes after four weeks and almost disappears after eight weeks.
- The **US** FDA warned that current vaccines are "not well matched" to the Omicron BA.2, though they provided some protection that was improved by boosters. The current COVID-19 vaccine design would thus have to be update before the expected wave of infections in autumn.

Sources: Our World in Data via Haver Analytics; and AMRO staff calculations.

Note: Percent of fully vaccinated population shows the number of people who received all doses prescribed by the vaccination protocol (e.g. one dose of a single-dose vaccine, or two doses of a two-dose vaccine). In the event of discrepancy between data from Our World in Data and national authorities, data from national authorities take precedence.
World: New Cases by Region

(7-day average; thousand cases)

ASEAN+3: Daily New Cases by Size of Population

(7-day average; thousand cases)

Selected ASEAN+3: COVID-19 Hospitalizations

(Thousand persons)

Selected ASEAN+3: Aggregate Non-Residentsials Mobility

(Percentage change from baseline; 5-day moving average)

Sources: Haver Analytics, sourced from Johns Hopkins University; and AMRO staff calculations.

Note: For ease of comparability, ASEAN+3 economies are grouped by population size.

Note: Baseline refers to the median value of the corresponding day in the period Jan 3–Feb 6, 2020. "Non-residentials" refer to the aggregated mobility data for places such as groceries and pharmacies, retail and recreation facilities, transit station and workplaces. ASEAN-5 = Indonesia, Malaysia, the Philippines, Thailand, and Singapore. CLMV = Cambodia, Lao PDR, Myanmar, and Vietnam.
